

MOM#2

From: Priyankar Kumar

Addressed To: Mrs. Srishti

In this meeting we were given a detailed overview of what work is expected of us.

- Firstly we link Saumya and Aakash's work.
- Then we take the shapefile generated by above process and convert it to an image. We are working with image files because of complexity involved with shapefiles.
- Ananth has to find a way to get the extents of the floors and detect stair case.
- He has to label the floors.
- Then we have to visualize all the floors with all three coordinates involved (x,y, z) as sectional front view.
- This has to be then overlaid on top of Google Maps with real coordinate system.
- We have to work on the orientation part like in the real map. It should have a compass showing which way is north. User should be able to view different cross sections from different angles.
